#### ABSTRACT

The Chapter 1 Remedial Reading and Mathematics Program was implemented in New York City by the Division of Special Education's District 75/Citywide Programs to provide remedial instructional services to students with severe handicaps at 23 public and 3 non-public school sites serving approximately 1,220 students; among these students, 77 also received mathematics instruction. Overall, the program fell slightly below its achievement goal that 75 percen' of students gain in reading skills as measured on the Stanford Diagnostic Test. Of the 769 students who attended at least 20 sessions, only 72.0 percent (554) showed a gain in reading skills. Of the 5 students who attended at least 20 mathematics sessions, 11.1 percent learned new mathematics skills at the rate of 5 per 20 sessions, and 40.0 percent learned new skills at a rate of 2 or more per 20 sessions, but both figures are below program goals. Office of Research, Evaluation, and Assessment (OREA) evaluators found that the Chapter 1 program was implemented by an experienced staff and provided staff development on a variety of relevant topics. In general, equipment and supplies were satisfactory, but staff thought that more computers would improve implementation. The Parents as Partners in Reading component provided parent outreach, along with parent workshops. OREA recommendations for program continuation are provided. Seven tables and two appendixes provide evaluation data. (Author/SLD)

## District 75/Citywide Programs Chapter 1 Remedial Reading and Mathematics Program 1991-92

### **EVALUATION SUMMARY**

The Chapter 1 Remedial Reading and Mathematics Program was implemented by the Division of Special Education's District 75/Citywide Programs. It provided remedial instructional services to students with severe handicap at 23 public and three non-public school sites serving approximately 1220 students; among these students, 77 also received mathematics instruction.

- The program was implemented as planned.
- Overall, the program fell slightly below its achievement goal that 75% of the students gain in reading skills as measured on the Stanford Diagnostic Test.
   Of the 769 students who attended at least 20 sessions, only 72.0 percent (554) showed a gain in reading skills.
- Overall, the program fell short of both its math objectives. Of the students who attended at least 20 math sessions (N = 5), 11.1 percent learned new mathematics skills at the rate of five per 20 sessions, and 40.0 percent learned new skills at a rate of two or more per 20 sessions attended. Both of these figures are below the program goals that 30 percent of the students achieve mathematics skills at the rate of five per 20 sessions, and 80 percent achieve these skills at the rate of two or more per session.

OREA evaluators found that the Chapter 1 program was implemented by a thoroughly experienced staff, and provided staff development covering a variety of relevant opics, although classroom teachers and site supervisors indicated that they would like more staff development. Collaboration between classroom and Chapter 1 teachers was satisfactory. In general, equipment and supplies were satisfactory; however, both Chapter 1 and school staff thought that more computers would improve implementation. Chapter 1 parent outreach was conducted through the program's Parents As Partners In Reading (PAPIR) component, centrally located Parent Resource Center and on-going parent workshops within the respective program sites. Finally, the instruction provided

5

i

was consistent with the program design. In general, staff feedback on the program was very positive; few suggestions were made for improving program implementation. These suggestions are presented below, along with OREA's recommendations:

- Increase efforts and review procedures in reading with level 1 students;
- Select alternative assessment measures more appropriate to the population served by the program;
- Provide staff development for site administrators and more computer training and computers for all personnel; and,
- Inform classroom teachers for Chapter 1 parent involvement activities, provide them more feedback about their students' progress and more opportunities to get involved in the program.

### **ACKNOWLEDGEMENTS**

This report was prepared by the Division of Strategic Planning/Research and Development, Office of Research, Evaluation, and Assessment (OREA), under the direction of Dr. Henry Solomon. Dr. Deborah Allen served as project coordinator and wrote the report in consultation with Dr. William Askins. Dr. Allen also supervised the quantitative analysis. Site visits were conducted by Dr. Deborah Allen, Jennifer Parker, Dr. Renee Schmerler, Mildred Berkey, Sandra Parris, Talia Meller, Hazel Reid, and Abe Strum. Carol Meyer, senior editor, provided ongoing editorial support.

Additional copies of this report are available by writing to:

### I. INTRODUCTION

### PROGRAM PURPOSE AND GOALS

The Chapter 1 remedial reading and mathematics program for District 75/
Citywide programs was designed to meet the educational needs of special
education SIE VII and SIE VIII students in those academic areas. The program's
focus was to maintain and/or improve the educational achievements of the
participating students.

According to the program proposal, program goals were that:

- 75% of the students receiving remedial reading instruction would gain in reading skills as measured by the Stanford Diagnostic Reading Test;
- 80% of the students receiving remedial mathematics instruction would master mathematics skills at the rate of two or more skills per 20 sessions attended, and 30% would master five or more skills per 20 sessions attended as measured by administration of the Individualized Criterion Referenced Test (I.C.R.T.);

ıs

nat

ing

 all of the students' classroom teachers would be provided with training that would equip them to prepare the students to move to less restrictive environments in special or general education sites; and

 workshops would be scheduled regularly for the parents of the participating students through the PAPIR (Parents As Partners In Reading) program.

### INSTRUCTIONAL ACTIVITIES

Reading instruction.

Reading instruction was to be provided using a holistic approach; that is,

listening, speaking, reading, and writing were to be taught as integrated processes.

Sses.

Word processing computer programs were to be provided to the students, to allow

them to "publish" their work for their respective schools and for <u>Inside Citywide</u>, a publication authored by special education students in District 75 schools.

### Mathematics Instruction

Mathematics instruction was to focus on teaching requisite skills which had been assessed by the I.C.R.T.

### **EVALUATION ACTIVITIES**

The Office of Research, Evaluation, and Assessment (OREA) collected data on program implementation and the nature and extent to which staff development was provided for classroom teachers. Field consultants observed reading and mathematics instruction in 11 classrooms and conducted interviews with site supervisors. OREA also collected student attendance and achievement data recorded by participating classroom teachers. OREA also developed surveys which were collected from 38 classroom teachers, 15 Chapter 1 teachers, and 66 teachers and other school personnel in attendance at three selected staff development sessions.

### II. IMPLEMENTATION AND FINDINGS

### SERVICES PROVIDED

During the 1991-92 school year, the Chapter 1 remedial reading and mathematics program for the District 75/Citywide programs provided remedial instructional services to students with severe handicaps in 23 public and three non-public school sites serving approximately 1,220 students; among these students, 77 also received mathematics instruction. The program almost doubled in size from the previous school year, eight new sites and Chapter I teachers were appointed to serve SIE VII and SIE VII students. However, only students who attended 20 or more days and had pre- and post-test scores are included in the analysis. Table 1 shows the students who met both those criteria.

The Chapter 1 program placed a Chapter 1 teacher at each school, except for one teacher who provided services to two of the non-public schools in the program. The Chapter 1 reading and math teachers worked with four to six classroom teachers, using a whole class model where teachers worked with all students in a class at once. In the non-public schools, the Chapter 1 teachers served 40-50 students, with small groups of students pulled out of their classrooms for Chapter 1 instruction. The Chapter 1 teachers in the non-public schools met with the groups of students for a minimum of three periods per week. At all schools, Chapter 1 provided materials and equipment in support of program activities.

<sup>\*</sup>Only students with complete data including test level and pre-and posttest scores who attended at least 20 sessions are listed here.

<sup>&</sup>lt;sup>b</sup>(R/M) indicates sites where reading and math instruction took place.

### STUDENT OUTCOME DATA

The program accomplished its achievement goal in reading for only one-fifth of the students in the program. Of the 769 students who attended at least 20 sessions and had complete data, only 171 (22.2 percent) met the program goal for reading achievement, as measured by the Stanford Diagnostic Reading Test (see Table 2). For the majority of the students, 550, only 69.6 percent showed a gain in reading.

In mathematics, 11 percent of the 45 students learned new mathematics skills at the rate of five per 20 sessions, and 40 percent learned new skills at a rate of two or more per 20 sessions attended (see Tables 3 and 4). Both these figures are below the program goals that 30 percent achieve mathematics skills at five per 20 sessions, and that 80 percent achieve these skills at the rate of two or more per 20 sessions.

In addition, the District Programs Evaluation Unit of OREA conducted an evaluation of the District 75 Chapter 1 student progress as measured by improvement in the D.R.P. tests given throughout the city in spring 1991 (pretest) and spring 1992 (posttest). Altogether, 769 District 75 Chapter 1 students took both tests. In all grade levels, students showed declines in D.R.P. scores. It should be noted that the decline in scores was not different than the general decline in D.R.P. reading scores seen across schools in New York City in 1991-92.

Table 2: Students Demonstrating Gains in Reading Achievement, by Test Level (N = 769)

Test Level	Total Number of Students <sup>b</sup>	Number Showing Gain	Percent Showing Gain
1	550	383	69.6
2	184	143	77.7
3	25	19	76.0
4	10	9	90.0

Source: OREA-developed student Data Retrieval Forms

- Almost 70 percent of the students (grades equivalents 1-3) showed improvement in reading skills, falling short of the goal that 75 percent would do so.
- Twenty two percent of the upper level students (grade equivalents 3-12) exceeded the program goal for reading.

<sup>\*</sup>Reading Achievement was measured by the Stenford Diagnostic Reading Test, which has the following grade equivalents for each test level: 1 = grades 1-3; level 2 = grades 3-5; level 3 = grades 5-9; end level 4 = grades 9-12.

<sup>\*</sup>Only students with complete data including test level and pre- and post-test scores (769) who attended at least 20 sessions were included in this enalysis.

Table 4: Students Demonstrating Gain in Mathematics Achievement,\* by Number of Objectives Mastered, by Site.

- Fifty percent of the students receiving mathematics instruction achieved at a rate of two or more skills per 20 sessions attended.
- Eleven percent of the students receiving mathematics instruction achieved at a rate of five or more skills per 20 session attended.

<sup>\*</sup>Eighty percent of students will mester mathematics skills at the rate of two or more skills per 20 sessions attended end 30 percent will master five or more skills per 20 sessions attended as measured by administration of the I.C.R.T.

<sup>\*</sup>Only students who ettended 20 or more sessions were included in this analysis.

### CLASSROOM ACTIVITIES

Field observers' comments about instruction conducted by the Chapter 1 teachers are presented in Apper 'ix A and summarized below.

- All instruction occurred in small groups
- Most teachers engaged students in oral reading activities
- All the teachers used a variety of reading materials, including basal readers, trade books, newspapers, audio-visual equipment, and teacher-developed materials
- Positive student-teacher rapport was observed in all settings
- Classroom teachers assisted Chapter 1 teachers in classroom management, and providing instruction and feedback to students
- Most teachers provided students with pre-reading activities, including motivation, vocabulary development, and/or discussion prior to instruction

### CLASSROOM TEACHERS: SURVEYS AND INTERVIEWS

Survey data were received from 38 classroom teachers (see Table 5: Summary of Classroom Teacher Survey). In the main, the survey responses were all very positive, especially in the summary question of overall program effectiveness.

One important aspect of the program was the provision of staff development for the classroom teachers, who indicated that they used many of the strategies that had been demonstrated by the Chapter 1 teachers. A majority of the classroom teachers (29 of 38) also indicated that they had found using a holistic instructional approach with their students to be very effective. Teachers were positive in their comments about the Chapter 1 teacher's role as resource person.

One area which clearly needs improvement is parent outreach. Few classroom teachers were involved in the parent outreach activities.

### CHAPTER 1 TEACHERS: SURVEYS AND INTERVIEWS

Survey data were received from 15 of the 22 Chapter 1 teachers. If these, only two worked with SIE VIII students, while the others worked with SIE VIII populations (see Table 6: Summary of Chapter 1 Teacher Survey). Fourteen of the 15 Chapter 1 teachers had been in the position for less than five years; of these nine had only been hired during the current school year, reflecting the increase in the number of sites from 15 to 22.

In general, the Chapter 1 teachers noted that:

- the staff development activities provided them with practical information related to program implementation, instructional methods, and staff collaboration;
- they used a variety of approaches for reading and mathematics instruction including newspapers, information resource books, poetry, and trade books with the students; and
- their collaboration with teaching staff included planning for the grouping of students by functional levels, classroom management, and alternative teaching strategies.

Classroom teachers felt the program was making a very positive impact on students in the areas of attitudes and classroom behaviors, applicability of skills to other aspects of their life, moving to less restrictive environments and improvement in academic skills.

### Site Supervisor Interviews

The site supervisors had positive comments about the functioning of the Chapter 1 programs within their respective schools (see Appendix B: Site

Supervisors' Comments and Recommendations). Their responses to the interviews addressed the benefits of the program for student motivation and enhancement of their skills, and its provision of instructional enrichment opportunities. The site supervisors also indicated that the program benefited teacher staff development by providing them with new instructional approaches.

In interviews, site supervisors seemed fully aware of all aspects of the Chapter 1 program. A few supervisors indicated a desire to integrate a whole language approach throughout the classes in the respective sites, thus, the Chapter 1 program provided a support for those initiatives. Some felt there was not sufficient opportunity to schedule collaboration between school staff and Chapter 1 teachers or sufficient space in the school to accommodate the program. Site supervisors also recommended that more computers be provided at sites, and that the Chapter 1 Teacher be more accessible within the school ( in response to the monthly staff development days).

### Parent Outreach and PAPIR Parent Resource Center

The Chapter 1 program expanded its implementation of the PAPIR program this year with the establishment of a Parent Resource Center at the District 75 central office, staffed by one of the assistant program directors, as well as the regularly scheduled parent sessions held within the respective sites. The PAPIR component of the program includes outreach to parents through a variety of activities, with the goal of monthly parent workshops on providing support for students' reading and math skills at home. Chapter 1 also provided materials to parents on both a loan and permanent basis.

The Parent Resource Center was not evaluated during the 1991-1992 school year

because it was newly established. The Program Director indicated that extensive outreach is being conducted to increase parent participation and use of the Center.

### Staff Development

The Program Director organized monthly staff development sessions for the Chapter I Teachers and Classroom Teachers from the respective school sites.

OREA field consultants attended three sessions and collected surveys from the 66 teachers who attended. Overall, the response to the sessions were very positive.

(Table 7 shows the teachers' responses to the staff development sessions.)

### III. CONCLUSIONS AND RECOMMENDATIONS

Overall, the Chapter 1 remedial reading and mathematics program for Citywide District 75 Programs was highly effective. Chapter 1 implemented its classroom activities as planned, provided staff development in the holistic teaching approach to classroom teachers, expanded the PAPIR program and showed its effectiveness in improving student skills and school attitudes, and provided Chapter 1 and school staff with material support for all program components. All of the personnel associated with the program indicated that they were satisfied with the program, and especially praised the use of the holistic approach and collaborative aspects of the program. With the expansion of the program to seven additional sites, staffed by newly appointed Chapter 1 teachers, the program fell slightly short of its targeted reading goal, that 75 percent of the students have increased achievement in reading, and did not achieve its mathematics goal. Despite the fact that the program was well directed and the program coordinator provided excellent staff devlopment for the Chapter I teachers which reflected current research and practices in reading instruction, the majority of the students did not meet the stated goals in reading or mathematics. Those findings suggest that the tests used to determine student outcomes may not be entirely suitable for the special education population served.

Other related findings were: school-based personnel did not feel that adequate time was provided them for Chapter 1 staff development. And, only a few classroom teachers were involved in the parent outreach activities, and several

suggested that their participation be facilitated.

Based on the above findings, OREA makes the following program recommendations:

- Increase efforts and review procedures in reading with level 1 students;
- Select alternative assessment measures more appropriate to the population served by the program;
- Provide staff development for site administrators and more computer training and computers for all personnel; and,
- Inform classroom teachers of Chapter 1 parent involvement activities, provide them more feedback about their students' progress and more opportunities to get involved in the program.

### Appendix A

### OREA Consultants' Comments from Observations of Reading Classes

### TEACHING PRACTICES/CLASSROOM MANAGEMENT

- Teacher provided students with ongoing, positive feedback, repetition, and emphasis on "no winning," to create a non-competitive environment.
- Teacher balanced active and quiet instructional activities.
- Relaxed atmosphere: children worked alone, with individual ettention provided se needed. Other students, having
  finished working in their books, had a choice of activities; e.g. helping one enother with map skills, working with
  persprofessional on fleeh cerds.
- Teacher had good rapport with students, complimented them for good behavior. For an acting-out child who wanted
  to Isave the room, teacher had the child sit for awhile at a dask set apart.
- Teacher used holistic approaches for reading.
- Good atmosphere: constently changing teaks for children, with many choices, though one period did not seem to be enough time for some of the students.
- The use of a game-playing instructional model involving a tax-lavy teacher and two persprofessionals was affective in
  engaging and maintaining students' attention and participation. This format enabled students to greep the lesson in a
  relexed, fun atmosphere.
- A cooperative/pertnership approach to learning was used. Students worked in small groups (2-3), and were encouraged to discuss assignments and consult pertners before answering certain questions. The teacher said that the cooperative model facilitated an effective support system, helped to build self-confidence, encouraged greater perticipation, and cut down on students' tendency to be too self-centered and individualistic. The teacher said that this approach enabled students to feel less alone and more willing to take risks in responding to questions and in otherwise participating in class. Most students perticipated with enthusiasm.
- This was a successful teaching/learning experience in which the teacher and the curriculum content atimulated students to maintain top-level perticipation.
- The teacher conducted the class with enthusiasm and creativity, demonstrating a remarkable ability to get children socited about learning.

### STUDENT BEHAVIOR/PARTICIPATION

- At the beginning of the SIE VIII class, it took all three teachers (tax-levy, paraprofessional, and Chapter 1) to get the class settled down. Students showed signs of being emotionally disturbed: emotional outburste, flere-upe, fighting, and other inappropriate behavior which had a negative impact on the class progress. Notwithstending, the Chapter 1 Teacher was able to get the students engaged in a newspaper lesson that she had planned for them. After a short time the students were eagerly participating.
- The reading material engaged the interest of some students for most of the period.
- In general, it appeared that the SIE VII students gave little or no indication that they had any emotional handicaps.
   They seemed to be absorbed in the lesson and to be learning from the experience.

### Appendix B

### Site Supervisors' Comments and Recommendations (Compiled from Interviews and Surveys)

### SITE SUPERVISORS' COMMENTS

### Benefits to Students--Motivation

- The Chapter 1-funded program increses self-esteem.
- Special ettention helps etudente to improve.
- The program encourages students to read and take risks, with the opportunities for success.
- Students ere now showing en increasing ability to read and an increasing interest in reading, so that the book is no longer the enemy, but e source of enjoyment.
- The Chapter 1 program allows the child to have another piece and other experiences away from the homeroom.
- During the second year of the progrem, students begen to show increesed responsibility; and, off-task end time-out behavior decreesed.

### Benefits to Students--Skills and Enrichment

- Chapter 1 reinforces skills by work in small groups, in additional meth end reading periods.
- Chapter 1 enriches the school program in meny weys: the children get additional reading experiences that they need; they are provided with more diverse and creative teaching approaches that are more responsive to their needs; and they are being provided with improved student-teacher interactions.
- Students are now reading well as a result of the Chapter 1 program and the expertise of the Chapter 1 teacher.
   Students have really blossomed this year with this teacher, more than we ever thought possible.

### Benefits to Teachers and to Staff Development

- The current model for Chapter 1 is the most effective format yet developed: 1) it provides supervision for severely emotionally hendicapped youngsters; 2) it essists children's progress; 3) its' outstanding steff development element provides real hends-on practice which enables teachers to do well; 4) it provides feed-back opportunities, unlike those in pull-out models; end it, (5) end provides opportunities for the teachers to coordinate teaching methods. Meterials are made evailable to all teachers.
- Teachers ere eucoseeful et applying effective stretegies by individualizing the program to meet etudente' neede.

### SITE SUPERVISORS' RECOMMENDATIONS

- Need to expand the program to include meth to additional sites.
   Increase number of Chapter 1 teachers to three, to serve two sites
- · Establish e Parent Resource Center in Brooklyn
- Involve classroom teachers in ordering meterials and have materials based in the classrooms, not in the Chapter 1
  Resource room.
- Very setiefied with program; hope to maintain it at its current level.
